

# AMERICAN STAINLESS & SUPPLY

solutions group

American Stainless & Supply announces **Solutions Group** growth.

For the last two years, American Stainless & Supply has been acquiring and providing new products in the sanitary and industrial solutions arena to compliment our traditional PVF lines. This process has evolved into a new segment of our company called The Solutions Group. These materials generally fall into two categories; sanitary/high purity or non-metallic corrosion resistant items made from Teflon (PTFE, FEP, PFA), kynar (PVDF), polypro FRP, halar, Tefzel and HDPE. Sanitary components are available for the food process and cosmetic industry while BPE compliant tubing, fittings & valves are specified for pharmaceutical and bio-tech facilities.
